

INTERLIGHT MOSCOW

14th INTERNATIONAL TRADE FAIR FOR LIGHTING,
LIGHT TECHNOLOGY & INTELLIGENT BUILDING TECHNOLOGY
EXPOCENTRE FAIRGROUNDS
DECEMBER 09 – 12, 2008 IN MOSCOW

Press release

INTERLIGHT MOSCOW – Russia. Light. INTERLIGHT.

Trade visitors from whole Eastern Europe meet each other at INTERLIGHT MOSCOW to inform themselves about newest technologies, trends and developments of the lighting industry. For 14 years now, the leading trade fair is used as market place by key companies with focus on decorative lighting, technical luminaries, electrical engineering and LED.

In 2007, more than 400 international exhibitors presented their products on 16,450 sqm exhibition space (a plus of 8 per cent). Around 18,500 visitors came to INTERLIGHT MOSCOW 2007, 58 per cent came from the Moscow region and 42 per cent from the Russian regions and CIS. The number of visitors reflects the positive growth of the Russian regions, where new infrastructure programs and an increased buying power results in higher demand for light technologies.

INTERLIGHT MOSCOW is the ideal forum for the lighting industry in Russia and Eastern Europe. The trade fair is amended by a broad lecture program. Renowned international experts inform exhibitors as well as visitors about technical developments and new applications. In 2008 lectures focus on LED and lighting design. Asia, Germany, Spain and Turkey are providing publicly-sponsored pavilions. Furthermore a Russian region presents itself at INTERLIGHT MOSCOW 2008.
